This type of vector may be used in a new method for quantifying Mycobacterium infection in vivo. An animal is injected with e.g. Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of antibiotic, tuberculostatic and vaccine

                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is the complete sequence of plasmid pMH30-lux. This plasmid has been constructed by inserting a multiple cloning site and an Escherichia coli T1T2 terminator sequence into plasmid pPA207SC, based on plasmid pMY206 (AAT28281), to give plasmid pMH28 (AAT28272) and insertion of a multiple cloning site to give pMH28 (AAT28273). A mutant firefly luciferase (EC-1.13.12.7) reporter gene, with an Ile ATA codon (rare in mycobacteria) changed to ATC to enhance expression, is inserted to give pMY30-lux. The vector is expression, is inserted to give pMY30-lux. The vector is extrachromosomal, and contains a synthetic BCG heat shock protein. hsp70-tac promoter. Although levels of transformants are low, expression levels are very high from the hsp70-tac promoter. This type of vector may be used in a new method for quantifying Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of antibiotic, tuberculostatic and vaccine

This is the complete sequence of plasmid pMV206. This plasmid may the has been used in construction of vectors for use in Mycobacterium to spp. The plasmid may be modified to construct plasmid pPA207SC, to followed by insertion of a multiple cloning site and an Escherichia coli TIT2 terminator sequence, to give plasmid pMH28 (AAT28272) and its derivative plasmid pMH29 (AAT28273). A mutant firefly luciferase (EC-1.13.12.7) reporter gene is inserted to give plasmid pMV30-lux (AAT28278). This type of vector may be used in a new method for quantifying Mycobacterium infection in vivo. An animal is injected with e.g. Mycobacterium bovis BCG, etc., transfected with one of these vectors, and reporter gene expression is detected by luminescence in tissues without lysis or cell concentration. The method may be used to determine the efficacy of

This is a plasmid containing sequences necessary for replication in mycobacteria. It contains a synthetic multiple cloning site to facilitate versatile molecular cloning and manipulations for foreign gene expressions in mycobacteria and for integration into the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2794
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 version of plasmid pyUB125, which had 792 bases of the tet gene (inactivated by prior manipulations) deleted. The plasmid represents an expression vector. The HSP61 coding sequence was inserted between the NheI and BamHI sites to form pMV65A.

NOTE: When the proteins encoded by this sequence were decoded, the published sequence was found to contain approx. 65 codons which did not code for the amino acids dictated by the universal genetic code. The sequence also contained many insertions and deletions which upset the open reading frame that was displayed as the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Expression vector for expressing protein or polypeptide in mycobacterium - conty DNA sequences encoding lipoprotein secretion signal and peptide heterologous to bacteria expressing

REFERENCE AUTHORS TITLE ACCESSION VERSION KEYWORDS RESULT 1 CNS0091P/c FEATURES COMMENT SOURCE DEFINITION JOURNAL ORGANISM source Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleater de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library fly), g AL05301 Drosophila melanogaster genome sur BACR19D16 of RPCI-98 library from fly), genomic survey sequence. and how to order individual BAC clones, the entire library, filters for hybridization from the BACPAC Resource Center compand at http://bacpac.med.buffalo.edu/drosophila_bac.htm. Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                CNS012I3

collaboration with the Berkeley Drosophila Genome Project (BBGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RRCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BBGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BBGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Canadias at the Roswell Park Cancer Institute in Buffalo,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      42;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The cDNA library was prepared using the Stratagene pBluescript II XR cDNA library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction
                                                                                                                           Erpelding."
                                                                                                                                                                                                  site of the pBluescript vector. The ligated cDNA fragments were transformed into XL10-Gold host cells. This library

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CNS01087 961 bp DNA linear GSS 26-JUL-1999

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton

                                                                                                                                                                                                                                                                                    Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Razutoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             aacttaagcacttatctcgatccatttcccgatgggtctggcgcaacttcacccccgaaa 1044
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CSGGMGSSSCCVGGRCCSVVSGGSGCSMSGCGMCGCSSSSGSGCGCSCSCGCSCGCGGSC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      727
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Local Similarity 30.5 nes 137; Conservative
Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATAAAATAATATTTTWWWTATTAATT
